

# Types of WordPress Plugins I Should Use

WordPress plugins tree

As you can see from the above chart, it is more like the family tree of plugins off the main WordPress core. The explanation and the presentation of it is my interpretation of the WordPress plugin hierarchy. I know some of you may not agree, some of you will, and even more of you will think it is over simplified, but that's the kind of thing I meant to convey.

The WordPress core itself is extremely secure, and by that I mean as secure as any content management system, CMS out there can be. Since it is written and updated by developers, and has a whole community behind it helping its validity, it is one of the most secure CMS's out there today. It has checks and balances because of it.

The WordPress core, (red,) is the most secure version of your site. As it moves to the right and you keep adding more and more things, such as plugins, it gets less secure, (white.) Coming off of the green into the blue area denotes a

website that is more vulnerable to breaking and/ or getting hacked. My best advice is to make sure security is in place, and research your vanity plugins thoroughly before installing them.

**Must have plug-ins:** These are the plugins in my book that I feel no WordPress website should be without. This will definitely vary from person to person, and from developer to developer. These are the plugins that I recommend, and I am totally open to this changing as I learn more or hear better arguments. That can happen a lot in this business, and one of the coolest thing about WordPress. In this area I have the following categories: **Backups, Updating, Security, and Anti-spam.**

**Should have WordPress plugins:** These are the plugins that you will install after you have finished installing and testing the plugins on the “Must have” list. This section, plus the previous section will give you a fully functioning interactive site, with the bare minimum of headache when you are trying to keep your site secure. I have included the following categories in this area: **SEO, Caching, Responsiveness, and Forms.** Personally I don’t think you can do without any of the plug-ins from either of the above areas. This, to me, is a full site if you are looking to have a functional, interactive site, that also has the chance to be discovered in the web.

**Vanity WordPress plugins:** Believe it or not, this is a favourite section of mine. I do like my Vanity plugins, because some of them are really cool, add value, and most are very well supported. I am not one of those developer that will poo-poo you because you want to add vanity plugins to your website. If I am designing your website you just have to abide by my rules when it comes to any plugins in this category. You just have to be careful how you choose a Vanity plugin, and what purpose it is supposed to serve on your site.

**I have created a table for you to look at** with specific examples of plugins I use that fall into each of the areas. Also when adding a new plugin directly from the list below, I have outlined the procedure below, and this procedure should work most of the time, but otherwise it is very easy to figure out:

1. Click the link to the plugin
2. Download the plugin to your hard-drive
3. Go back into your “Admin” section of your site

4. Select "Plugins"
5. Select "Add New"
6. Select "Upload Plugin" at the top of the page
7. Click the "Choose file" button
8. Find the plugin on your hard-drive - highlight file and select Open, (usually in your downloads folder.)
9. Click the "Install Now"
10. Activate plugin
11. Re-read documentation on the plugin to know how it sets itself up on your computer
12. Check that plugin is there and configure it

### Video coming soon on how to download and install a plugin

Area	Category	Specific plugin (* = Best in my book)
Must Have	Backup	<a href="#">Backup Buddy</a> * No free version
		<a href="#">BackWPU</a> * - Free
	Updating	<a href="#">iThemes Sync</a> * Free - on-line service <a href="#">JetPack Monitor</a> Free - on-line service <a href="#">ManageWP</a> * Monthly subscription - on-line service
	Security	<a href="#">iThemes Security</a> * Free and paid version <a href="#">Sucuri</a> * No free version - on-line <a href="#">CloudFlare</a> * Free and paid version - on-line service <a href="#">Really Simple CAPTCHA</a> - Free
	Anti-Spam	Akismet - * Free and comes with WordPress
Should Have	SEO	<a href="#">WordPress SEO</a> by Yoast * Free and paid version
	Caching	<a href="#">W3 Total Cache</a> * - Free and paid version <a href="#">P3 (Plugin Performance Profiler)</a> - Free

	Forms	<a href="#">Gravity Forms</a> * - No free version <a href="#">Contact Forms 7</a> * Free
Vanity	Editor	<a href="#">WPEdit</a> * Free
	Social buttons	<a href="#">Floating Social Bar</a> * Free <a href="#">SumoMe</a> - Free and paid version - On-line service with plugin

Area	Category	Specific plugin (* = Best in my book)
	Widgets	<a href="#">Display Widgets</a> - Free
	Media Library	<a href="#">Enhanced Media Library</a> - Free
	Typography	<a href="#">Google Font Manager</a> - Free <a href="#">Hide Title</a> - Free <a href="#">No Page Comment</a> - Free <a href="#">Yet Another Related Posts Plugin</a> - Free

**There are definitely tons more plugins than this**, but this will give you a basic idea of the areas that you will most likely need to fill first. Whatever you are looking for can be found by following the steps above the table for finding a plugin or a type of plugin. Let's say you have an idea and you want to see if there is a plugin exists that might help, then type it in.

**Remember that a bad plugin has the potential** of crashing your site. So when you install a plugin, always check that your site is working after **EACH** install. Don't install 5 or 6 plugins, and then check your site. If it isn't working, then there is no way to tell which plugin was responsible. So take your time and test, test, test as much as you can. Try and limit the number of plugins you install, and delete the plugins that you are not using. Also delete any themes that you aren't using as well. This can help the possible chances that a hacker can get to your website, but all of this is discussed in another article with this site, when I talk about how to tighten up, or lock down your site.

## Ten things I do

These are the ten things that I do when I initially start on a clients website. These can vary and some other thing may be done depending on the scope of the project. Most of these are must haves, and others are dependent on the clients needs. But number 10 is a must and happens on every build. Have fun.

1. Change admin user name to something else
2. Install iThemes Security. Run Scan and set it up
3. Delete unused plugins and themes

4. Install W3 Total Cache, and configure it.
5. Install a good backup plugin like BackUp Buddy by or BackWPup, and back up the website.
6. Change permalinks, and other aspects of the settings tab.
7. Make sure the theme, and the plugins I use are well supported.
8. Delete all default pages, posts, and comments
9. Install SEO by Yoast - if client wants search engine work
10. Make some tea or coffee.

This is not all I do, but I make sure these 10 things are definitely done.

---

# WordPress SEO

**WordPress SEO** - By [Team Yoast](#) - *a must install*

Love this plugin and it is a must have, but there is a learning curve with this, and this is where my yerly subscription to lynda.com comes in handy. I can learn from the best in there.

The first true all-in-one SEO solution for WordPress, including on-page content analysis, XML sitemaps and much more.
